

RAPID-10

Product known as “Anti-Viral Surface Disinfectant” on their website and what we know as Rapid-10

The disinfectant contains a natural anti-microbial and anti-viral active ingredient found in many foods.

- Delivers high performance sanitisation of all types of hard surfaces including food preparation surfaces
- Formulation includes a surfactant that provides highly effective cleaning
- Biocidal effectiveness has been demonstrated in compliance with the following standards: EN1276, EN1650, EM13697 and EN14476+A1.
- The anti-microbial active substance containing formulation is effective against a wide spectrum of bacteria and viruses.
- Readily biodegradable, low toxicity, eco-benign formulae. Minimises environmental impact.
- Contains no quarternary ammonium salts or chlorine compounds.

Both human safety and environmental classifications are vastly superior to many competing technologies.

It carries no environmental labelling and would therefore not cause damage to the environment during use or even if an accident occurred.

The active substance is a natural material produced by fermentation and is thus much safer to the environment than other disinfectants.
